Objective

To consistently provide high-level skills to fulfill tasks in a team setting, while completing individual projects and maintaining an efficient and friendly working environment.

Experiences

Copenhagen School of Design and Technology   2017 - 2021
Student

- I have been introduced to basic principles of design and learned how to code for frontend production, mainly with HTML and CSS. Currently, during Web Development, I am creating projects using Svelte, React, Node, and MongoDB.
- Created a fundamental base of JavaScript programming in which I am continuously adding new JavaScript frameworks such as React.js and more.
- During my Multimedia education, I worked on different projects where I applied the knowledge I acquired in class from which I formed a practical mind.
- I learned to manage day-by-day life with school and job-related responsibilities to fulfill all the requirements in a proper time manor.

Flyhjaelp.dk   Nov 2019 - Jan 2020
Ful-stack developer intern

- Flyhjaelp is a flight assistance company that helps travelers claim the entitled compensation in case of flight delays/cancellations.
- During the internship, I worked on the development of their platform iClaimer. iClaimer is built upon the JavaScript library Vue for frontend and the PHP library Laravel for the backend manipulation.
- I have learned how to work with the MVC approach while building production tests using Jest, Cypress ,and PHP Unit and using Git as version control.

Copenhagen School of Design and Technology   Feb 2020 - present
Academic tutor & student assistant

- As a tutor at KEA I have the opportunity to help students with various programming tasks involving JavaScript, HTML, CSS, and PHP while introducing some students to React.js or Vue.js.
- While solving code-related issues I have been guiding them towards a logical mindset and good programming practices that will help them in future career choices.

Miami Bar & Café Copenhagen   2019 - present
Frontend developer

- Miami Bar is a well-known bar located in the center of Copenhagen which attracts many tourists and guests yearly that are looking to party during the weekend.
- I have been hired by this company to redesign their online presence. Prior, they had a WordPress theme installed with minimal information and requirements for a modern website.
- I coded the website from scratch, created and applied user testing to make sure the user interface and the user experience is intuitive and eye-catching.
- I am currently using WordPress as a CMS that offers the REST API with the events that are displayed on the front page.
- Overall, I am constantly creating new pages and updates that are inquired by the company, while continuously maintaining the website.

Valuer.ai   Oct - April 2019
Frontend developer intern

- Valuer.ai is a startup that brings together big corporations and investors to enhance investment and startup engagement.
- During my internship, I got my hands on working with WordPress and building landing pages in close cooperation with the Chief Marketing Officer and the developers' team.
- I applied the knowledge learned during my multimedia design education and have published work on the company website.

Education

Copenhagen School of Design and Technology
Top-up Bachelor degree in Web Development   2019 - 2021

- To further my education and enrich my knowledge and skills, I am currently completing a bachelor's in web development covering fundamental areas such as frontend frameworks and databases.
- Currently, during the second semester, we are implementing real-life applications using React.js, Node.js, Svelte, and MongoDB.

AP degree in Multimedia Design and Communication   2017 - 2019

- The team-based program consisted of covering a wide range of topics such as programming in HTML, CSS, and JavaScript and user interface design in addition to a successful internship and final project.

Projects

Weather app

- The challenge set for this task was to develop a comprehensive web-based mobile-friendly weather-app with fast loading times and a friendly UI.
- I created features such as a dynamic map of the searched city using Mapbox, charts that measure the temperature, humidity, and speed over the following days and a user-friendly interface with Material-UI.
- Everything was put together using React together with Git and npm. Search by your hometown and see what is the forecast for the following days.

Plantify

- Plantify is a platform created by a team of four, myself included, which aims to provide a digital solution to a non-profit organization seeking to address the environmental issues our world faces today.
- Plantify allows users to donate money, have a tree planted in their name and access to a platform from which they can track the progress of their trees. This solution helps face the current deforestation problems by encouraging users to plant trees and build a community.
- Included in the digital solution was a completed business plan and a fully functional meticulously designed website including a dashboard and more.

Tools

Programming
- Visual Studio
- Git
- Sublime Text
- Bootstrap Studio
- WordPress
- Xampp
- Postman

User Interfaces
- Adobe Photoshop
- Adobe Illustrator
- Adobe Prototype XD

Skills

Programming
- React.js
- Vue.js
- Node.js
- Laravel
- HTML & CSS/SCSS
- JavaScript
- PHP

UI/UX
- Userflows
- User testing
- Interaction Design
- Prototyping
- Responsiveness

Databases
- mySql/MariaDB
- MongoDB

Testing
- PHP Unit
- Jest
- Cypress
